

NON-MAGNETIC MINE PRODDER

For the location of anti-personnel mines buried at depths up to 250mm. Primarily intended for situations where a magnetic device could activate a mine but it may also be used where magnetic fields are not considered important.

The Prodder is light-weight, man portable and is stored until use in a carrier pouch attached to personnel in service webbing equipment.

Each Mine Prodder is tested to ensure compliance with STANAG 2897 Annex C prior to delivery.
